Correct and Magnificent ...forms assembled in light.' - Le Corbusier

Critical essay by Jean Wainwright

AFTER a long international competition and arduous testing process, the much-delayed Editions Scolaires project is now almost complete. A recent visit to the studio of Buro Happold, an engineering consultancy, revealed the extent of the work that has gone into this ambitious project.

The studio is a hive of activity, with engineers poring over computer models and discussing the latest designs. The project involves the construction of a new school building, which will be a landmark in the local area.

The design is based on a modular system, allowing for flexibility in the layout of the classrooms and public spaces. The building is expected to be completed by the end of the year.

The team is confident that the project will be a success, and are looking forward to seeing the finished product.

Meanwhile, in the world of art and design, there is much excitement about the upcoming exhibition at the Tate Modern. The show features works by some of the most influential artists of the 20th century, including Picasso, Warhol, and Basquiat.

The exhibition opens next month and is expected to draw large crowds. The curators have worked hard to ensure that the works are presented in the best possible way, and the results are impressive.

Overall, it is a promising year for art and engineering, with exciting projects and exhibitions taking place around the world. The未来 city is a place where art and engineering come together to create beautiful and functional spaces.
